Who We Are

Bullrox, in collaboration with its network of high-quality manufacturers, continues to provide reliable solutions in the construction machinery spare parts sector.

With our expert team and years of experience, we offer a wide range of products — primarily including backhoe loader attachments, as well as loader and excavator attachments. Our products make a difference in the industry by delivering superior performance and long-lasting durability.

We have successfully established ourselves as a trusted business partner in the international market. By delivering modern engineering solutions to customers around the world, we continue to strengthen our leading position in the industry.

With environmentally conscious production processes and our ability to quickly adapt to technological innovations, we are building the future.

If you are looking for a reliable partner for your construction projects, choose Bullrox — and feel the difference..

Company Profile

What Is Our Product Range?	04
Heavy Duty Bucket	05
General Purpose Bucket	06
Trenching / Root Excavation Bucket	07
Loader Bucket	08
Grading Bucket	09
Rigid Dump Truck	10

Heavy Duty Bucket

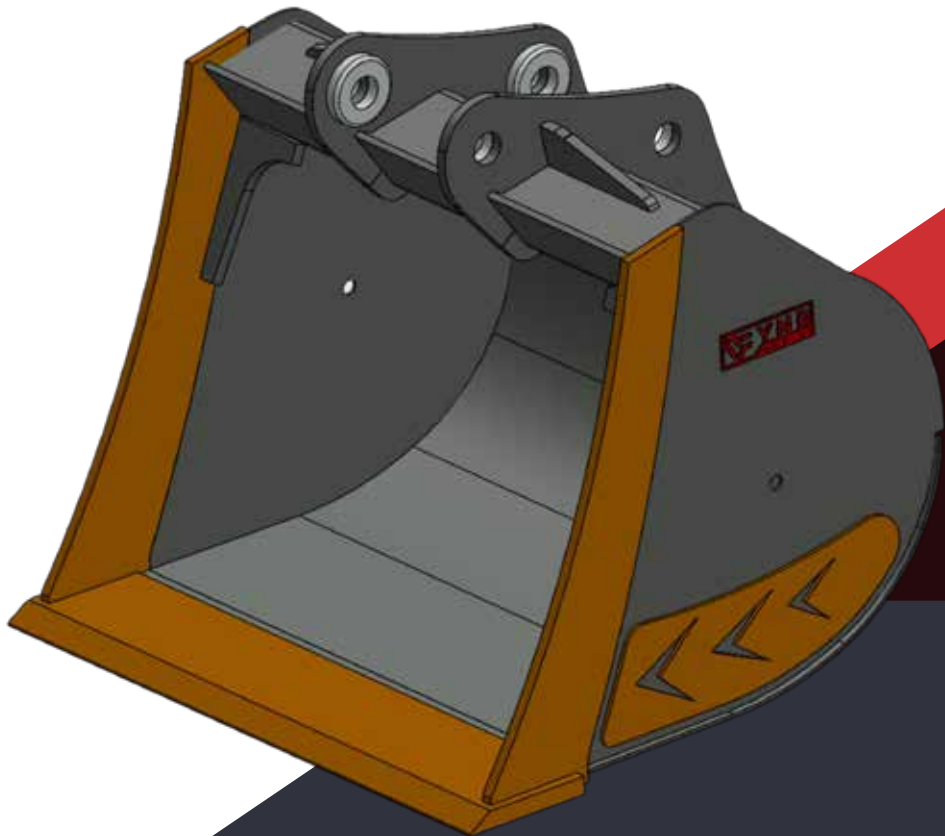

General Purpose Bucket

At Bullrox, our general-purpose buckets are versatile and durable attachments specifically designed for handling and loading a wide range of materials. With their robust construction and flexible usability, they stand out as essential equipment across various industries such as construction, mining, agriculture, and infrastructure projects.

These buckets are manufactured in various sizes and shapes to meet different operational needs. They offer high efficiency, particularly in handling and loading materials such as soil, sand, and gravel. Thanks to the use of high-strength materials and a durable design, they deliver long-lasting performance even under the toughest working conditions.

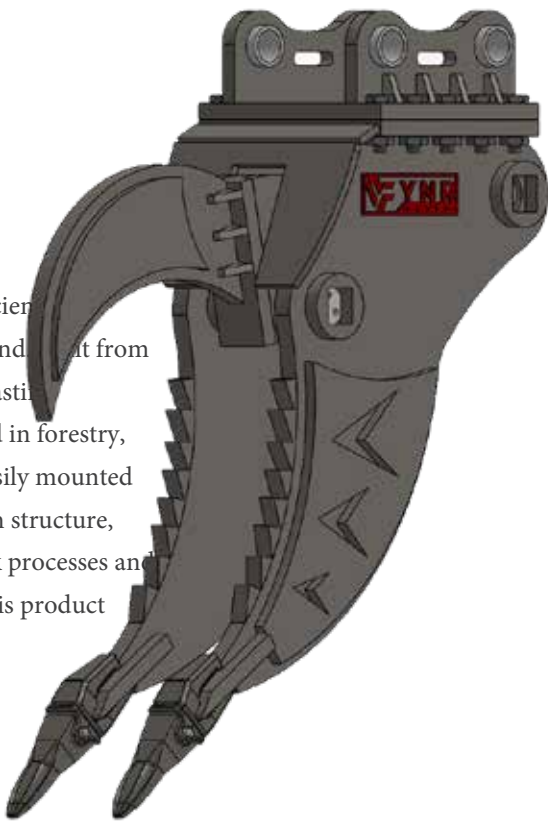

The cutting edge, side cutters, and the side and bottom plates of these buckets produced by Bullrox are made from Hardox 450 Steel to provide superior protection against wear. All other parts are manufactured using wear-resistant ST-52 grade steel, ensuring durability and long service life.

At Bullrox, we aim to maximize the capacity of construction machinery with our general-purpose buckets that combine functionality and durability. These products accelerate work processes and optimize costs while prioritizing quality in every detail, providing a reliable solution at every stage of your projects.

Root Ripping & Splitting

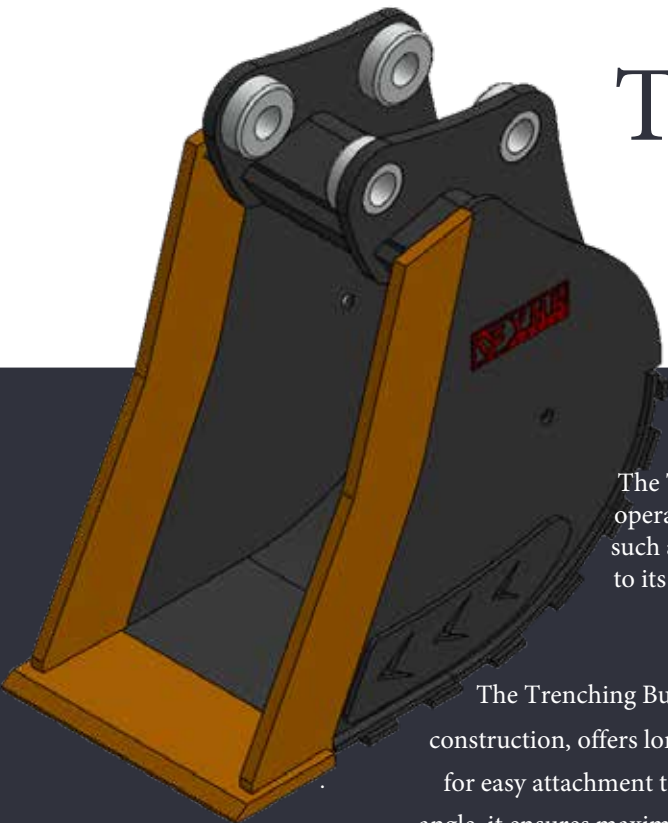

The Root Ripping and Splitting Attachment is designed for efficient uprooting and breaking apart tree roots, stumps, and hard ground. Made from high-strength steel and wear-resistant materials, it offers long-lasting durability and adapts to tough working conditions. Widely used in forestry, agriculture, and construction sectors, this attachment can be easily mounted on excavators and delivers maximum efficiency. Its robust tooth structure, ergonomic design, and high breaking force help accelerate work processes and reduce operational costs. Manufactured with Bullrox quality, this product provides a reliable and durable solution.

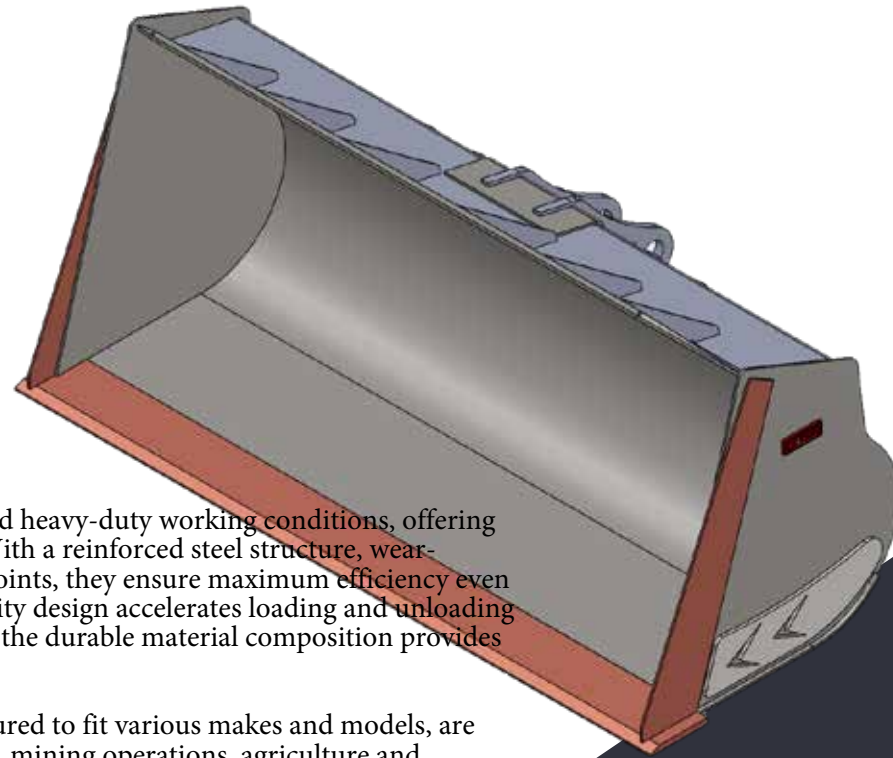

Trenching Bucket

The Trenching Bucket is specifically designed for precise digging operations in narrow spaces. It delivers high efficiency in projects such as water channels, drainage lines, and cable trenches. Thanks to its narrow and elongated structure, it is ideal for deep and tight excavations..

The Trenching Bucket, manufactured with durable steel and wear-resistant construction, offers long-lasting performance. Its strong mounting points allow for easy attachment to excavators. With sharp edges and an optimized digging angle, it ensures maximum efficiency with minimal power consumption. Backed by Bullrox quality, the Trenching Bucket provides a reliable, durable, and high-performance solution for precise excavation operations.

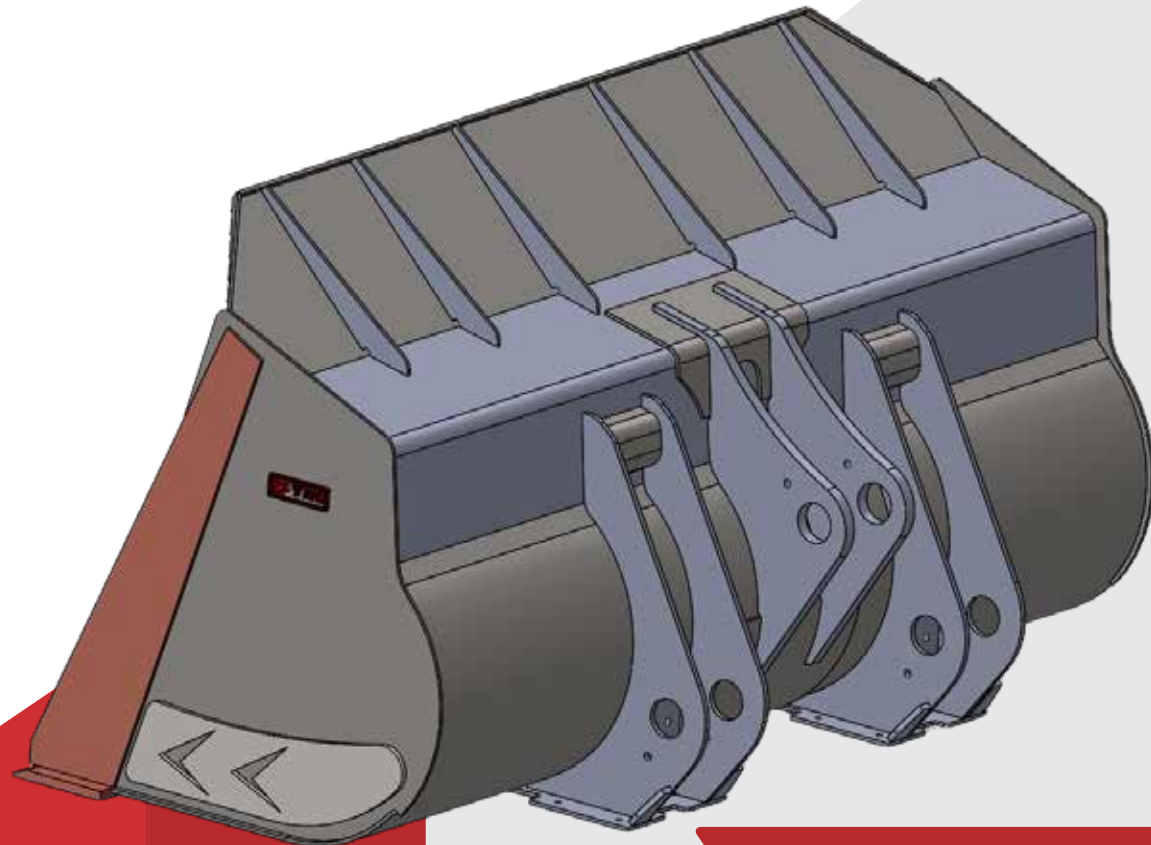

Loader Bucket

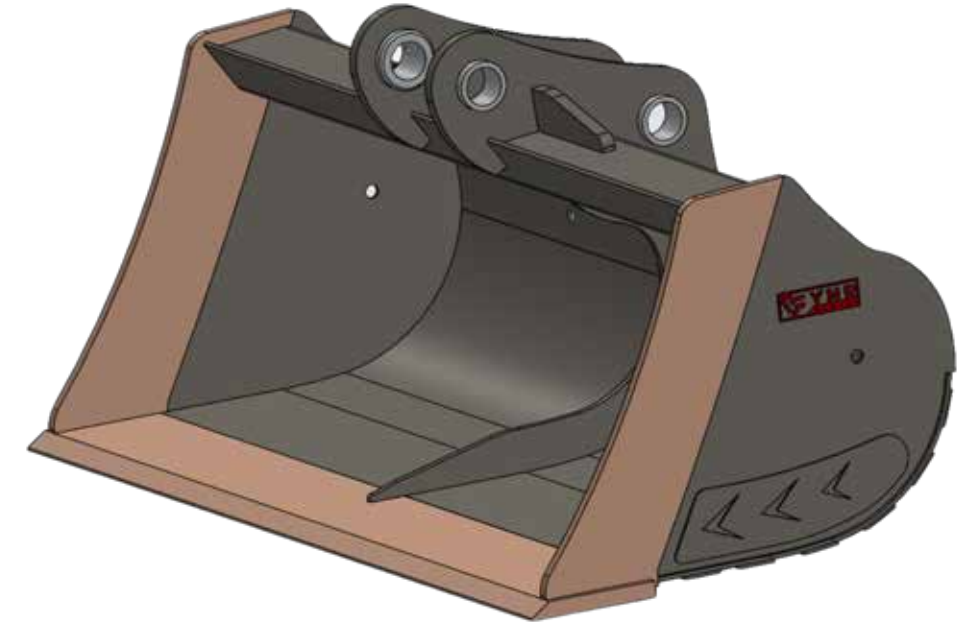

Loader buckets are designed to withstand heavy-duty working conditions, offering high performance and long-lasting durability. With a reinforced steel structure, wear-resistant cutting edges, and robust connection points, they ensure maximum efficiency even in the toughest environments. Their large-capacity design accelerates loading and unloading processes, boosting operational efficiency, while the durable material composition provides excellent resistance to impact and abrasion.

Loader buckets, which can be manufactured to fit various makes and models, are widely used in excavation and construction sites, mining operations, agriculture and livestock sectors, as well as in industrial material handling. Produced in accordance with high quality standards, Bullrox loader buckets offer a reliable solution that ensures long-term use and cost efficiency for businesses. For custom production and technical details, please feel free to contact us.

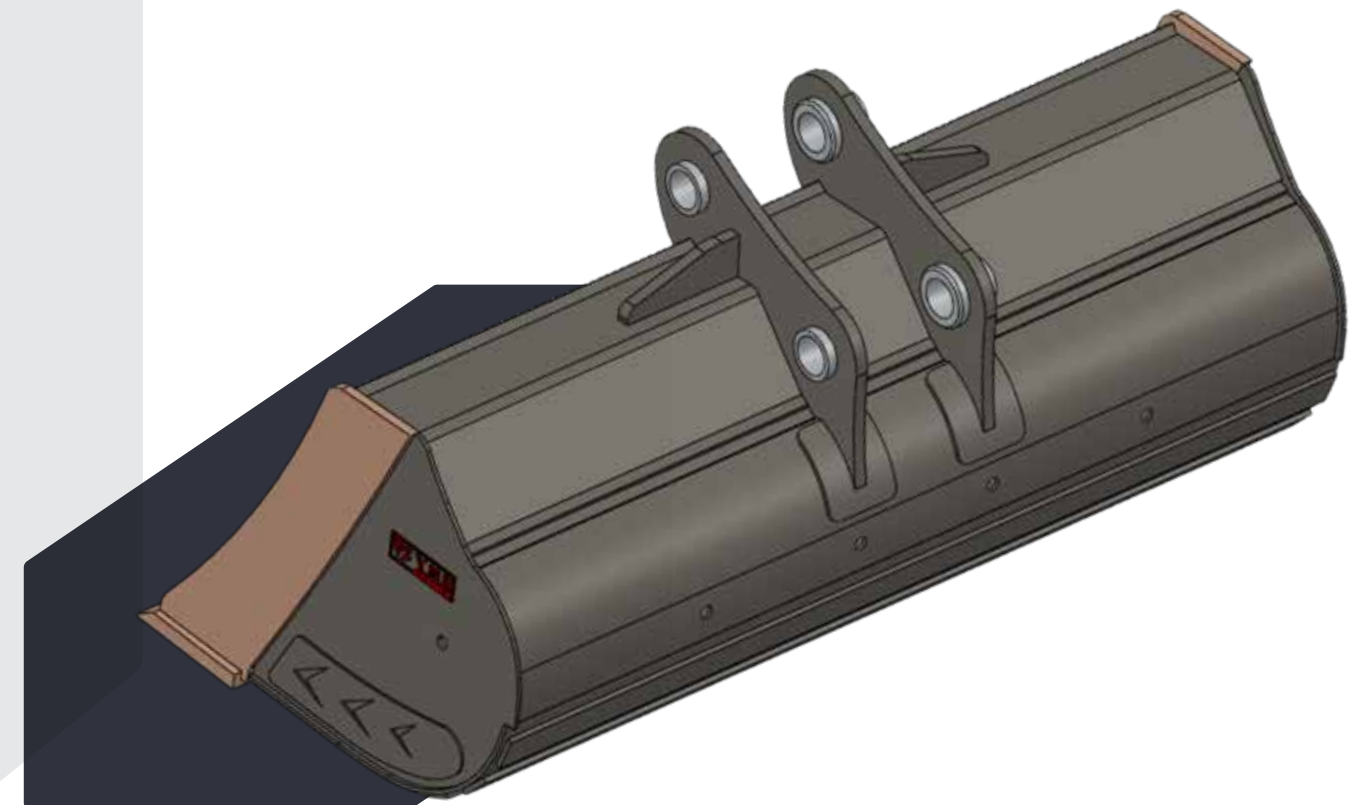

Grading Bucket

Grading buckets are designed to provide high efficiency in ground leveling, excavation, and material spreading operations. With their reinforced steel structure and specialized design, they ensure precise surface leveling, making them highly effective for use in construction, road building, and landscaping projects.

The wide base surface of the grading bucket ensures even material distribution, while its durable cutting edges offer maximum resistance to wear. Its lightweight yet robust construction reduces the load on the machine, contributing to fuel efficiency and extended equipment life.

Grading buckets can be manufactured to fit various brands and models of loaders and are widely used in excavation, agriculture, landscaping, and infrastructure projects. Produced to high-quality standards, Bullrox grading buckets offer maximum durability and efficiency, helping businesses streamline their operations. For detailed information and custom production options, please contact us.

Rigid Dump Truck

Bullrox Rigid Dump Truck Bodies – Built for Heavy-Duty Transport

Rigid Dump Truck bodies manufactured by Bullrox are specifically engineered for heavy-duty hauling applications and are constructed from high-strength, wear-resistant steel. Designed to perform under the most demanding working conditions, they ensure long-lasting durability and maximum operational efficiency.

These dump bodies deliver outstanding performance in mining sites, quarries, large-scale earthmoving operations, and industrial material transport tasks. The body structure, made from heavy-duty steel, offers superior resistance to impact and abrasion, while reinforced connection points ensure a secure integration with the truck chassis.

The optimized internal surface lining prevents material from sticking, allowing for faster and more efficient unloading. A high-performance hydraulic lifting system ensures safe and rapid dumping, reducing operation times. In addition, the optimized dump angle guarantees a smooth and continuous material flow, ensuring maximum unloading efficiency.

Bullrox Rigid Dump Truck bodies are designed to handle extreme payloads, providing secure transport of large volumes of materials in mining and excavation projects. They are ideal for transporting rock, debris, sand, gravel, and other bulk materials in quarries and industrial environments.

Manufactured to the highest quality standards, Bullrox dump bodies help reduce operating costs and deliver long-term efficiency for businesses.

With robust design, high durability, and superior efficiency, Bullrox Rigid Dump Truck bodies are the ideal solution for all heavy-duty transportation needs. For custom production options and detailed information, please feel free to contact us.
